

# Intro to AI Agents

# ChatBots Vs Agents

- ChatBot/LLM
  - The Brain (Logic, Reasoning, Language...)
- AI Agent
  - +Hands (tools)
  - +Memory
  - +Knowledge (RAG)
  - +Goal ←

# Planning Vs Booking

| Feature    | ChatBot                                   | <u>AI Agent</u> ←                                                                 |
|------------|-------------------------------------------|-----------------------------------------------------------------------------------|
| Input      | "Plan a 3-day trip to Tokyo."             | <u>"Book a 3-day trip to Tokyo."</u>                                              |
| Response   | Generates a text <u>itinerary</u> list.   | <u>Checks flight prices, confirms dates,</u><br><u>and drafts hotel bookings.</u> |
| Limitation | You have to go book the flights yourself. | It triggers the actual booking system<br><u>APIs.</u>                             |

# ChatBots Vs Agents

- ChatBot/LLM (The Thinker)
  - Reactive: Waits for you to prompt it.
  - Isolated: Limited to its training data.
  - Text-focused: Produces words, not actions.
- • AI Agent (The Doer)
  - → Proactive: Can work on a goal over multiple steps.
  - → Integrated: Can use external tools (Google, APIs, Files).
  - → Outcome-focused: Executes a workflow to finish a task.

# Agents are Wrappers around LLMs
